

Python Assignment – 29

Q1) Check File Exists in Current Directory

Problem Statement: Write a program which accepts a file name from the user and checks whether that file exists in the **current directory** or not.

Input: Demo.txt

Expected Output: Display whether Demo.txt exists or not.

Answer :

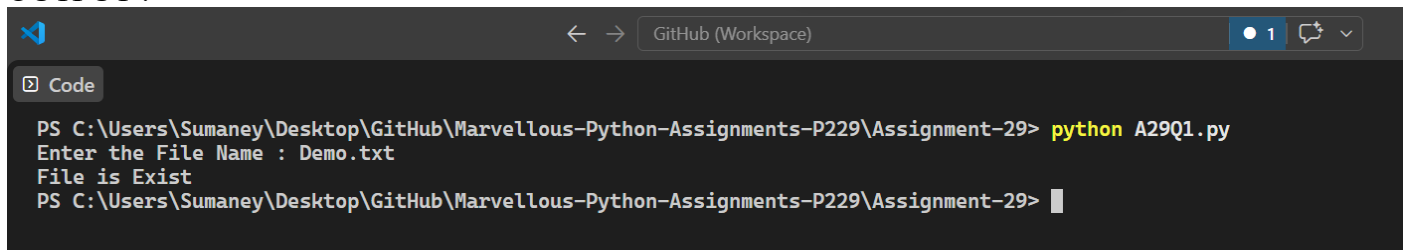

```
import os

def main():
    FileName = input("Enter the File Name : ")
    File = os.path.exists(FileName)

    if (File == True):
        print("File is Exist")
    else:
        print("File Not Exist")

if __name__ == "__main__":
    main()
```

OUTPUT :

```
PS C:\Users\Sumaney\Desktop\GitHub\Marvellous-Python-Assignments-P229\Assignment-29> python A29Q1.py
Enter the File Name : Demo.txt
File is Exist
PS C:\Users\Sumaney\Desktop\GitHub\Marvellous-Python-Assignments-P229\Assignment-29> 
```

Q2) Display File Contents

Problem Statement: Write a program which accepts a file name from the user, opens that file, and displays the **entire contents** on the console.

Input: Demo.txt

Expected Output: Display contents of Demo.txt on console.

Answer :

```
def main():
    FileName = input("Enter the file Name : ")

    File = open(FileName, "r")
```

```

    FileData = File.read()

    print(FileData)

    File.close()

if __name__ == "__main__":
    main()

```

OUTPUT :

```

PS C:\Users\Sumaney\Desktop\GitHub\Marvellous-Python-Assignments-P229\Assignment-29> python A29Q2.py
Enter the file Name : Demo.txt
# =====
# Author : codingwithamar@gmail.com
# File : A29Q3.py
# Path : Marvellous-Python-Assignments-P229\Assignment-29\A29Q3.py
# Subject/Question : Copy File Contents into a New File (Command Line)
# Write a program which accepts an existing file name through command line arguments,
# creates a new file named Demo.txt, and copies all contents from the given file into Demo.txt.
# Description : Input (Command Line): ABC.txt
# Expected Output: Create Demo.txt and copy contents of ABC.txt into Demo.txt
# =====

PS C:\Users\Sumaney\Desktop\GitHub\Marvellous-Python-Assignments-P229\Assignment-29>

```

Q3) Copy File Contents into a New File (Command Line)

Problem Statement: Write a program which accepts an existing file name through **command line arguments**, creates a new file named Demo.txt, and copies all contents from the given file into Demo.txt.

Input (Command Line): ABC.txt

Expected Output: Create Demo.txt and copy contents of ABC.txt into Demo.txt.

Answer :

```

import os

def main():
    FileName = input("Enter Existing File Name : ")
    ExistingFile = open(FileName,"r")

    ExistingData = ExistingFile.read()

    DestinationFile = open("Demo.txt","w")

    DestinationFile.write(ExistingData)

    print("File data Create and Write Successfully")

```

```
if __name__ == "__main__":  
    main()
```

OUTPUT :

```
PS C:\Users\Sumaney\Desktop\GitHub\Marvellous-Python-Assignments-P229\Assignment-29> python A29Q3.py  
Enter Existing File Name : ABC.txt  
File data Create and Write Successfully  
PS C:\Users\Sumaney\Desktop\GitHub\Marvellous-Python-Assignments-P229\Assignment-29> █
```

Q4) Compare Two Files (Command Line)

Problem Statement: Write a program which accepts two file names through **command line arguments** and compares the contents of both files.

- If both files contain the **same contents**, display **Success**
- Otherwise display **Failure**

Input (Command Line): Demo.txt Hello.txt

Expected Output: Success OR Failure

Answer :

```
import sys  
  
def main():  
  
    File1 = open(sys.argv[1], "r")  
    File2 = open(sys.argv[2], "r")  
  
    Data1 = File1.read()  
    Data2 = File2.read()  
  
    if Data1 == Data2:  
        print("Success")  
    else:  
        print("Failure")  
  
    File1.close()  
    File2.close()  
  
if __name__ == "__main__":  
    main()
```

OUTPUT :

```
GitHub (Workspace) 1
Code
PS C:\Users\Sumaney\Desktop\GitHub\Marvellous-Python-Assignments-P229\Assignment-29> python A29Q4.py Demo.txt Hello.txt
Success
PS C:\Users\Sumaney\Desktop\GitHub\Marvellous-Python-Assignments-P229\Assignment-29> █
```

Q5) Frequency of a String in File

Problem Statement: Write a program which accepts a file name and one string from the user and returns the **frequency (count of occurrences)** of that string in the file.

Input: Demo.txt Marvellous

Expected Output: Count how many times "Marvellous" appears in Demo.txt.

Answer :

```
def main():
    FileName = input("Enter the File name : ")
    Words = input("Enter the desire String : ")

    file = open(FileName, "r")

    Data = file.read()
    count = Data.lower().count(Words.lower())

    print(f"{count} Times string appears in {FileName} File")

if __name__ == "__main__":
    main()
```

OUTPUT :

```
GitHub (Workspace) 1
Code
PS C:\Users\Sumaney\Desktop\GitHub\Marvellous-Python-Assignments-P229\Assignment-29> python A29Q5.py
Enter the File name : Demo.txt
Enter the desire String : Amar
1 Times string appears in Demo.txt File
PS C:\Users\Sumaney\Desktop\GitHub\Marvellous-Python-Assignments-P229\Assignment-29> █
```
