

Python Assignment – 28

Q1) Count Lines in a File

Problem Statement: Write a program which accepts a file name from the user and counts how many **lines** are present in the file.

Input: Demo.txt

Expected Output: Total number of lines in Demo.txt.

Answer :

```
def main():
    Lines = []
    Filename = input("Enter the File Name : ")

    File = open(Filename,"r")

    for Line in File:      # radlines() predefine function is Available
        Lines.append(Line)

    print("Line Of file is : ",len(Lines))

    File.close()

if __name__ == "__main__":
    main()
```

Q2) Count Words in a File

Problem Statement: Write a program which accepts a file name from the user and counts the total number of **words** in that file.

Input: Demo.txt

Expected Output: Total number of words in Demo.txt.

Answer :

```
def main():
    Filename = input("Enter the File name : ")

    FileObject = open(Filename,"r")

    Data = FileObject.read()
    Words = Data.split()
    print("Total Number Of Strings : ",len(Words))

    FileObject.close()
```

```
if __name__ == "__main__":  
    main()
```

Q3) Display File Line by Line

Problem Statement: Write a program which accepts a file name from the user and displays the contents of the file **line by line** on the screen.

Input: Demo.txt

Expected Output: Display each line of Demo.txt one by one.

Answer :

```
def main():  
    Filename = input("Enter the Name of File : ")  
  
    File = open(Filename,"r")  
  
    Data = File.read()  
  
    print("File Content : \n",Data)  
  
    File.close()  
  
if __name__ == "__main__":  
    main()
```

Q4) Copy File Contents into Another File

Problem Statement: Write a program which accepts two file names from the user.

- First file is an **existing file**
- Second file is a **new file**

Copy all contents from the first file into the second file.

Input: ABC.txt Demo.txt

Expected Output: Contents of ABC.txt copied into Demo.txt.

Answer :

```
def main():  
    Filename1 = input("Enter the Name of File1 : ")  
    Filename2 = input("Enter the Name of File2 : ")  
  
    file1 = open(Filename1,"r")  
    Data1 = file1.read()  
  
    file2 = open(Filename2,"w")  
    Data2 = file2.write(Data1)  
  
    print("Wrote data is String count is : ",Data2)
```

```
file1.close()
file2.close()

if __name__ == "__main__":
    main()
```

Q5) Search a Word in File

Problem Statement: Write a program which accepts a file name and a word from the user and checks whether that word is **present in the file or not**.

Input: Demo.txt Marvellous

Expected Output: Display whether the word Marvellous is found in Demo.txt or not.

Answer :

```
def main():
    Filename = input("Enter the file name : ")
    Word = input("Enter the finding Word : ")

    file = open(Filename,"r")

    Data = file.read()
    count = Data.lower().count(Word.lower())

    if count > 0:
        print(f"{Word} word found in file {count} times")

    else:
        print(f"{Word} Word not found in file")

    file.close()

if __name__ == "__main__":
    main()
```
