

Python Assignment 10

1. Write a program which accepts one number and prints multiplication table of that number.

Input: 4

Output:

4 8 12 16 20 24 28 32 36 40

Answer :

```
def multi(Num):  
    for i in range(Num, Num * 10, Num):  
        i = Num + i  
        print(i)  
  
def main():  
    print("Enter Number for Table : ")  
    num = int(input())  
    multi(num)  
  
if __name__ == "__main__":  
    main()
```

2. Write a program which accepts one number and prints sum of first N natural numbers.

Input: 5

Output: 15

Answer :

```
def SumNaturalNumber(Natural):  
    total = 0  
    for i in range(1, Natural + 1, 1):  
        total += i  
    print(total)  
  
def main():  
    print("Enter The number : ")  
    NaturalNumber = int(input())  
    SumNaturalNumber(NaturalNumber)  
  
if __name__ == "__main__":  
    main()
```

3. Write a program which accepts one number and prints factorial of that number.

Input: 5

Output: 120

Answer :

```
def factorial(num):
    total = 1
    for i in range(num, 0, -1):
        total = i * total
    print(f"Factorial of ", num, "is", total)

def main():
    print("Enter The number : ")
    NaturalNumber = int(input())
    factorial(NaturalNumber)

if __name__ == "__main__":
    main()
```

4. Write a program which accepts one number and prints all even numbers till that number.

Input: 10

Output: 2 4 6 8 10

Answer

```
def Even(Value):
    i = 2
    while i <= Value:
        print(i)
        i += 2

def main():
    print("Enter the Number : ")
    Num = int(input())
    Even(Num)

if __name__ == "__main__":
    main()
```

5. Write a program which accepts one number and prints all odd numbers till that number.

Answer :

```
def Odd(Value):
    i = 1
    while i <= Value:
        print(i)
        i += 2

def main():
```

```
print("Enter the Number : ")
Num = int(input())
Odd(Num)

if __name__ == "__main__":
    main()
```
