

Python Assignment 12

1. Write a program which accepts one character and checks whether it is vowel or consonant.

Input: a

Output: Vowel

Answer :

```
def CheckWhether(Text):
    Vowels = "aeiouAEIOU"
    if Text in Vowels:
        print(f"'{Text}' is Vowels")

    else:
        print(f"'{Text}' is Consonant")

def main():
    print("Enter the Word")
    Word = input()

    CheckWhether(Word)

if __name__ == "__main__":
    main()
```

2. Write a program which accepts one number and prints its factors.

Input: 12

Output: 1 2 3 4 6 12

Answer :

```
def factors(Value):
    RetArray = []
    for i in range(1, Value+1):
        if Value % i == 0:
            RetArray.append(i)
            i += 1
    return RetArray

def main():
    print("Enter the One Number")
    Num = int(input())
```

```
Ret = factors(Num)
print(f"'{Ret}' is the factors of '{Num}'")

if __name__ == "__main__":
    main()
```

3. Write a program which accepts two numbers and prints addition, subtraction, multiplication and division.

Answer :

```
def Add(No1, No2):
    return No1 + No2

def Sub(No1, No2):
    return No1 - No2

def Multi(No1, No2):
    return No1 * No2

def Div(No1, No2):
    return No1 / No2

def main():
    print("Enter Value1")
    Value1 = int(input())

    print("Enter Value2")
    Value2 = int(input())

    Addition = Add(Value1, Value2)
    print(f"'{Value1}' and '{Value2}' Addition is :", Addition)

    Substraction = Sub(Value1, Value2)
    print(f"'{Value1}' and '{Value2}' Substraction is :", Substraction)

    Multiplication = Multi(Value1, Value2)
    print(f"'{Value1}' and '{Value2}' Multiplication is :", Multiplication)

    Division = Div(Value1, Value2)
    print(f"'{Value1}' and '{Value2}' Division is :", Division)

    print("-----Thank You-----")

if __name__ == "__main__":
    main()
```

4. Write a program which accepts one number and prints that many numbers starting from 1.

Input: 5

Output: 1 2 3 4 5

```
def main():  
    print("Enter One Number")  
    Num = int(input())  
  
    for i in range(1,Num+1):  
        print(i)  
  
if __name__ == "__main__":  
    main()
```

5. Write a program which accepts one number and prints that many numbers in reverse order.

Input: 5 **Output:** 5 4 3 2 1

```
def main():  
    print("Enter One Number")  
    Num = int(input())  
  
    for i in range(Num,0,-1):  
        print(i)  
  
if __name__ == "__main__":  
    main()
```
