

Python Assignment-09

1. Write a program which contains one function named as Display() that prints "Jay Ganesh" on console.

```
def Display():  
    print("Jay Ganesh")  
  
def main():  
    Display()  
  
if __name__ == "__main__":  
    main()
```

2. Write a program which contains one function ChkGreater() that accepts two numbers and prints the greater number.

Answer :

```
def ChkGreater():  
    a, b = map(int, input("Enter Two Numbers : ").split())  
    print(type(a))  
    if a > b:  
        print("a is greater : ", a)  
    else:  
        print("b is greater : ", b)  
  
def main():  
    ChkGreater()  
  
if __name__ == "__main__":  
    main()
```

3. Write a program which accepts one number and prints square of that number.

Answer :

```
def sqr():  
    print("Enter the value for square :")  
    value = int(input())  
    print(value ** 2)          #Way1  
    print(pow(value,2))       #Way2  
  
def main():
```

```
sqr()

if __name__ == "__main__":
    main()
```

4. Write a program which accepts one number and prints cube of that number.

Answer :

```
def cube():
    print("Enter the value for square :")
    value = int(input())
    print(value ** 3)      #Way1
    print(pow(value,3))    #Way2

def main():
    cube()

if __name__ == "__main__":
    main()
```

5. Write a program which accepts one number and checks whether it is divisible by 3 and 5

Input: 15

Output: Divisible by 3 and 5

Answer :

```
def divisible():
    print("Enter The value : ")
    value = int(input())

    if value%3==0 & value%5==0:
        print("Value is divisible")

    else:
        remain3 = value%3
        remain5 = value%5
        print("value is not divisible\n")
        print("3 by remaining is :", remain3)
        print("5 by remaining is :", remain5)

def main():
    divisible()

if __name__ == "__main__":
    main()
```
